

Mesh Networks' End2End™ Network Solution is Deployed to Creekside Vue Luxury Apartment Homes

Mesh Networks' patent pending End2End™ Network Process and Bandwidth Management Solutions enable properties to provide the most bandwidth to each tenant.

HOUSTON, TX, USA, January 25, 2016 /EINPresswire.com/ -- Mesh Networks (Mesh), the emerging leader in network and bandwidth management solutions for wired and wireless deployments to commercial and residential facilities has successfully deployed their End2End™ Network Solution, which includes the state-of-the-art, [NetProfit® Bandwidth Management](#) System and the MeshVu™ Monitoring System to Creekside Vue Luxury Apartment Homes, a boutique Class A apartment home community located at 2120 Stephens Place, New Braunfels, TX 78130.

Mesh's End2End™ Network and patent pending Bandwidth Management and Optimization Solutions provide residential or commercial properties with reliable wired and Wi-Fi Internet connectivity. All residents, office staff and guests are provided a predefined service plan account, whether paid or free. Consequently, no one Internet user can consume more than their allocated share, thus every Internet user on the network gets their fair share of allocated bandwidth.

“Mesh is very pleased to have successfully deployed our state-of-the-art End2End™ network solution to this luxury apartment home community in cooperation with other contracted infrastructure vendors.”, said Joanne Luger, Vice President Sales, Mesh Networks. “ I take great pride in offering and then delivering the best in Internet connectivity. That’s our promise, it’s what we do. Mesh’s proprietary bandwidth management and optimization solution combined with our expert network design, deployment, ongoing maintenance, monitoring and support eliminates the complexities that property managers face when deploying and then managing wireless and wired services to commercial and residential facilities.

Mesh Networks’ full service, patent pending [End2End™ Process](#) is the core of their life-cycle approach to delivering complete network solutions to their customers including ancillary service contract due diligence, property assessment, design, deployment, ongoing systems maintenance, support and 24/7 network monitoring throughout the contract term.

“We take the time to fully evaluate the property owners’ needs and budget. We assess the property and design a custom solution based on our finding of fact”, Joanne Luger, Vice President Sales, Mesh Networks said. During the assessment, design and installation process, we work closely with the owner or designated contact, keeping the customer informed and included in the process. Mesh delivers on time and, after the installation, Mesh continues to support each property as if it were our own. Mesh’s number one goal is customer satisfaction.”

“The importance of providing the best in Internet services was principal to me as I realized it is paramount and central to every apartment home user. While I am interested in learning everything I can about networking, more importantly, I want it to work for the end user. I selected Mesh Networks based on their reputation as expert network designers and their willingness to work with me to keep

costs down”, said Tim Marroquin, Developer of the [Creekside Vue Apartment Community](#). “Mesh Networks delivered on time and in budget. There were no surprises, and they did not try to sell me unnecessary, overpriced equipment or services. My office staff is satisfied, and most importantly, my tenants are satisfied. I will use Mesh Networks again due to the quality of service I, my office staff, and the residents have received. I trust in their honest and fair business practices.”

About Mesh Networks

Mesh Networks (Mesh) founded in 2006, is the emerging leader in state-of-the-art Network and Bandwidth Management Solutions for wired and wireless deployments to commercial and residential facilities.
