

# PayServices Announces Launch of Innovative Financial Services Portal, Registration Now Open

*PayServices today announced open registration for its innovative new package of IT and financial service solutions.*

MIAMI, FLORIDA, USA, February 1, 2016 /EINPresswire.com/ -- PayServices today announced open registration for its innovative new package of IT and financial service solutions. These solutions offer customers a full range of options for improving the way that all symbols of value are managed and exchanged, including a mix of technological and systems offerings designed to help businesses and consumers move beyond outdated legacy systems and more effectively meet the demands of the increasingly complex new age of technology.

PayServices was created to help streamline the interactions and management of the entire value chain. That chain includes all of the symbols of value that consumers and businesses use in their interactions with one another: the US dollar, Euro, and other traditional currencies, digital currencies such as ButterflyBits, DNotes, and Bitcoin, complementary currencies like air miles and reward points, inventory currencies like barrels of oil or bags of rice, and even information currencies such as the data from surveys or opinion polls.

In the past, these disparate types of value symbols have been managed in segmented groups, typically isolated from one another, and on systems that were often incompatible with one another. The PayServices system offers a new and powerful way to incorporate all of these symbols through the use of an integrated financial, trading, bartering, and currency management system that offers multi-factor identification capabilities, an impressive secure online mail client, and search engine infrastructure, browsers, and apps – all within a secured ecosystem.

The PayServices ecosystem is also designed for maximum compatibility with older legacy systems, to ensure that users can enjoy the benefits of the system without the disruption that often occurs when users are forced to rapidly adapt to new technologies. Everything that has value can be effectively managed on PayServices.

The company's Vice President of Business Development, Willy Danenberg, has noted that the service

is tailored to resolving some of the most pressing value management issues plaguing today's marketplace:

"From our work with organizations, banks, and businesses we knew that the Internet, banking, treasury management and business all use tools and logic that are old and that were designed for reasons that don't necessarily exist anymore. We wanted and succeeded creating a system that changes and improves the way we individually and collectively interact and trade all symbols of value."

The PayServices ecosystem includes the company's own Butterfly apps that are available for Apple, Android, Blackberry, and Windows phones, the HTML 5 Butterfly secured browser loaded with AML and KYC features, and the Butterfly Magic Messaging System that provides authorization, credential verification, remote choice selection, and signature capabilities.

Users can effectively use one card to make purchases and exchange other symbols of value anywhere in the world, regardless of the form of currency being used. That enables consumers to spend everything from dollars or DNotes to diamonds, all without the need for time-consuming and costly value conversions.

PayServices is also proud to announce that it has developed strategic partnerships with trusted digital currencies like DNotes, providing a reliable and efficient way for digital currency customers to more efficiently use those currencies in the marketplace. As DNotes co-founder Alan Yong remarked, "PayServices is a project of massive scale and scope. It is designed and positioned to serve as a bridge between the old world of value segmentation and the new where everything that can be digitized will be digitized. PayServices is one step ahead of everyone else, and offers a gateway for global commerce where anything can be traded or exchanged".
