

Dr. Hanan Polansky Publishes New Commentary on the Link Between Microcompetition with Latent EBV and Hodgkin Lymphoma

The commentary appeared in the International Journal of Research in Medical Sciences.

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, March 13, 2016 /EINPresswire.com/ --

The Center for the Biology of Chronic Disease (CBCD) points out a new medical commentary entitled “Microcompetition with latent Epstein-Barr virus causes a transcription factor deficiency, under-expression of retinoblastoma (Rb gene), and classic Hodgkin lymphoma.” (1) Many studies report a link between EBV and Hodgkin Lymphoma. However, the exact mechanism through which the cancer develops is largely unknown.

The reduction in transcription of the Rb gene is important because cancerous cells in Classic Hodgkin Lymphoma (a type of lymphoma, in which cancer originates from a specific type of white blood cell) “show two kinds of changes in their retinoblastoma (pRb) tumor suppressor, inactivation through hyper-phosphorylation of the protein, and low concentration caused by underexpression or over-degradation.” (1) The medical commentary focuses on the under-expression option.

The commentary can be read here: <http://www.scopemed.org/fulltextpdf.php?mno=186731>

The authors of the commentary, Dr. Hanan Polansky and Adrian Javaherian note that “The principles of this explanation have been described by Hanan Polansky in 2003 in his book on microcompetition”

and has been reviewed in more than 20 leading scientific journals.

The Theory of Microcompetition is far-reaching. It applies to many viruses, many genes, and many diseases. The CBCD encourages doctors and other healthcare professionals to read Dr. Polansky's book, which predicted that viruses would be the cause of most major diseases, including certain cancers, more than ten years ago.

"The concept of Microcompetition (or Starved Gene) will change our approach in the study of chronic diseases and will furthermore give scientists a higher level of understanding in biology." - Dr. Marc Pouliot, PhD (See more reviews of Dr. Polansky's book at: <http://www.cbcd.net/reviews.htm>)
