

# Studies Show that Green Tea Works against HPV

*Green tea is one of the five ingredients of Gene-Eden-VIR.*

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, March 20, 2016 /EINPresswire.com/ --

“Infected with the human papillomavirus (HPV)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

A new medical commentary published in the Journal of Cervical Cancer discusses the role of green tea as an ingredient in the formula of the all natural, antiviral oral supplement, Gene-Eden-VIR. (1) According to this commentary and many studies, green tea extracts have antitumor and antiproliferative effects. (2)

The commentary specifically mentions a study by Dr. Stephen K. Tyring, which noted that “numerous published studies have established the health benefits of tea consumption. These health benefits—most specifically those of green tea—have been touted for centuries; however, the bulk of the scientific investigations of green tea have only emerged within the past 30 years or so ... catechins represent 60 to 80 percent of the total polyphenols in green tea ... (and) ... sin catechins in human cervical carcinoma cell lines infected with human papillomavirus ... inhibited cell growth in all four tumor cell lines by 50 percent.” (1) Additionally, “green tea catechins possess a wide range of pharmacological properties, including antiviral, anti-infective, and immunostimulatory properties ... catechins have been shown to have antiproliferative properties in various cell lines and may have direct virucidal (virus killing) effect.” (3)

The CBCD therefore recommends that HPV infected individuals take Gene-Eden-VIR or Novirin. These natural antiviral products have a patented formula, which includes

formula was found to reduce [HPV symptoms](#) in two separate post-marketing clinical studies that followed FDA guidelines. (4)

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the formula is effective against the HPV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy. The first study was published in a special edition on Advances in Antiviral Drugs.

Study authors wrote that, “individuals infected with the HPV...reported a safe decrease in their symptoms following treatment with (the formula of Novirin).” (4) The study authors also wrote that “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (4)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

What other treatments are available against the HPV?

“There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission.” (4)

In contrast, the formula of Gene-Eden-VIR and Novirin was designed to target the latent HPV.
