STEM CELL "VIRGINS" HELP [STROKE](#) PATIENTS!

Dr. David Steenblock D.O. (StrokeDoctor.com) announces that there are unused pristine "virgin" [stem cells](#) buried deep within every person's bone marrow that can be mobilized into the blood for a more perfect tissue regenerative process. These pristine or "virgin" stem cells, once activated, are more biologically potent than other bone marrow stem cells and by virtue of this produce impressive healing outcomes. These "virgin" stem cells are kept hidden and inactive during most of a person's life to prevent them being damaged from various age-related processes and environmental toxins.

Whenever the body undergoes severe stress due to injury or disease, these metabolically inactive but genetically more perfect stem cells are induced to become active, to divide, multiply and to migrate to injured body tissues or organs. Once in-place they provide these diseased or damaged tissues with an "uncontaminated genetic blueprint" that tell them how to make optimal, even exceptional repairs. This process results in a more complete repair of the affected tissues as compared to the use of stem cells that have age, toxin, and stress induced genetic defects present in them.

These "virgin" stem cells have gone largely unnoticed up to now as scientists and physicians have paid little attention to their identification and clinical use. Dr. Steenblock has developed a proprietary mixture of FDA approved drugs that stimulate the release of these "virgin" stem cells from a person's bone marrow while also stimulating the production of new ones within their bone marrow.

In addition, Dr. Steenblock has developed new methods that allow the extraction of these "virgin" stem cells from a person's bone marrow with very little discomfort as compared to the cumbersome & painful methods used by other physicians.

In a review of over 2,000 patients he has treated, Dr. Steenblock found that 95% of his stroke patients had significant improvement in at least one area of disability after being treated with Dr. Steenblock's "virgin" stem cell program. What was especially significant was that these stroke patients had all undergone many standard therapies in prior years but were still suffering, which is what initially prompted them to seek out Dr. Steenblock and his innovative therapeutic approaches.

Dr. Steenblock has specialized in the treatment of chronic diseases with stem cells since 2001.

Please contact us at 800-300-1063 to learn more about Dr. Steenblock and his advanced therapies for chronic stroke patients.
