

# Smooth White Copy Paper

DENVER, COLORADO, USA, April 18, 2016 /EINPresswire.com/ -- Paper is made from cellulose fiber. [Smooth white copy paper](#) is a lightweight paper that is used in copy machines also known as reprographic paper, [copier paper](#), dual-purpose, or xerographic paper. It's generally thin with a small amount of transparency. The grade of the paper is determined by brightness levels which is how light is reflected from the paper. It is the largest category in the uncoated commodity printing paper grade and many governments use it for all of their laser printing, fax, and copier needs. The most frequently used copier paper has a basis weight of 20 lbs. and thickness (caliper) is measured in ten thousandths of an inch. Whiteness has no impact on sheet performance but whiteness, brightness and smoothness do play an important role in the visual appeal of the sheet and printed product.
