# Meet Echosec at #GeoInt2016 to see the latest in Location-Based Social Media Search #SearchBetter

Increase your situational awareness with social data - Echosec's Location-Based Social Media Search

VICTORIA, BRITISH COLUMBIA, CANADA, May 9, 2016 /EINPresswire.com/ -- Echosec Systems Ltd., has announced their participation at the annual GEOINT Symposium where they are excited to be providing attendees of the event with a look at the latest version of their popular location-based search solution. The team from

echosec #SearchSmarter

Echosec will be demonstrating the platform specifically for the Military, Defense, and GeoInt community. This will be the first opportunity for the Geointel crowd to get a hands-on look at the cutting edge social media search using the recently released Echosec Pro and Enterprise offerings.

> " Echosec is the next generation of Search that connects you with billions of pictures and posts made by millions of people, which never normally make it to common search engines.
>
> *Karl Swannie, CEO, Echosec Systems Inc.*

Visitors to the Echosec booth (Booth #621) will have the opportunity to see and hear about the upcoming release of the software, including the yet to be released advanced searching functionality and the integration with Esri's ArcGIS, Enterprise GIS software.

Echosec is depended on by local government, police, military, OPSEC, national and local security agencies all over the world. Echosec search provides real-time map-based access to publicly shared social media posts from popular media sharing services like Twitter, Instagram, Foursquare, Youtube, and many more. Pro.echosec.net goes beyond Echosec public (free.echosec.net) search and includes additional data access and functionality like:

– Footprint, mapping a user's Twitter or Instagram timeline
– FlyTo, zooming to a posts location
– AIS (ship tracking)
– Youtube
– VK
– FourSquare
– Instagram
– Sina Weibo

– Panaramio
– Flickr

The GEOINT Symposium (www.geoint2016.com) is hosted annually by USGIF and offers the defense, intelligence, homeland security communities and other federal and civil GeoInt users and producers the opportunity to learn from senior leaders through an exciting agenda of keynote speeches. The Echosec team will be providing visitors to Booth #621 with a first-hand look at the latest features and functionality available to the GeoInt community.

About Echosec

Echosec is the next generation of search that connects you with billions of pictures and posts made by millions of people, which never normally make it to common search engines. Echosec is the first search engine of its kind to realize that 'where' matters as much as 'what'. The unique way of collecting and displaying dynamic and user-generated content from sites like Twitter, Foursquare and Instagram, gives Echosec a completely unfiltered and real-time view of the world. Echosec has become an indispensable resource for public safety, government, and law-enforcement agencies looking for information on global events. Defence and security applications for Echosec's technology are extensive. Public safety officials use Echosec while investigating criminal activity and to protect the public during major events.

Take Echosec for a test drive at free.echosec.net and connect with them via Twitter @Echosec_search

A 10 Day, trial of Echosec Pro can be requested at https://pro.echosec.net/signup
