

Shingles Outbreaks May be Caused by Suntanning; The CBCD Reviews a Report

Exposure to sun could be interpreted by the body as stress - especially if you're not used to it. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, May 24, 2016 /EINPresswire.com/ --

Ever had chickenpox? The CBCD recommends [Gene-Eden-VIR](#) or [Novirin](#) against the latent varicella zoster virus, which can cause chickenpox and shingles.

The varicella zoster virus (VZV, also known as herpes zoster), is a herpes virus that normally causes chickenpox in childhood. The virus may re-activate to cause shingles in those who have had chickenpox or the chickenpox vaccine. According to an article on [snews.com](#), a shingles outbreak may be caused, in some cases, by exposure to the sun. Dr. Benjamin Ticho, MD noted that "One common trigger, which often surprises people, is significant sun exposure." (1) Additionally, it is important to note that According to Bruce Ruben, MD, medical director of Encompass HealthCare in Michigan, it's the job of the immune system to suppress it. This is important since some doctors say that "it might take nine months to clear up ... or never." (1)

Click to learn more about [VZV symptoms](#).

"Shingles is caused by the varicella zoster virus, the same virus that causes chickenpox. After a person recovers from chickenpox, the virus stays in the body in a dormant (inactive) (latent) state. For reasons that are not fully known, the virus can reactivate years later, causing shingles." (2)

"A reactivation of VZV and an outbreak of Shingles can be bad enough without having to worry about the possibility of having an outbreak everytime you go out in the sun. That's

latent shingles virus with Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD

The formula of Gene-Eden-VIR and Novirin was designed to help the immune system target the latent form of the VZV and other herpes viruses.

The formula of these natural antiviral products was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against herpes viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (herpes viruses) ... reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (3) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (3)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites here:

<http://www.novirin.com>

and

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

Individuals should remember that “getting a sunburn can actually cause a case of shingles ... In addition to sun exposure or a cold, the following may lead to a shingles outbreak: weakened immune system, anticancer and immunosuppression drugs, stress or depression, especially if associated with a major life change or trauma.” (4)
