PUNE, INDIA, May 26, 2016 /  
EINPresswire.com/ -- About Dental Anesthesia

Anesthesia is reversible loss sensation which is induced by a drug known as anesthetics. Anesthetics are very different from a normal analgesic (pain killers) which relieves pain without loss of sensation. Anesthetics are generally administered to facilitate Surgery.

Dental Anesthesia is the field of anesthesia which includes Local Anesthetics but sedation and general anesthetics. Lidocaine is the most commonly used anesthetic, its half life in the body is 1.5 to 2 hours. According to recent trends heavy investment is going into R&D and technology to develop better delivery devices and improved techniques to deliver anesthesia. Anesthesia can be provided through various techniques such as sprays, needles or drops. Dental needle is an essential tool used by dentists on a regular basis, which is used to provide dental anesthesia to the patient for oral purposes.

The [dental anesthesia market](#) is expected to register a CAGR of about 8.9%
