

Non Clinical Information Systems Market Analysis and Forecast to 2027

Global Non Clinical Information Systems Market by component (Software, Hardware & Service), by applications & by deployment forecast to 2027

PUNE, INDIA, May 26, 2016 /

EINPresswire.com/ -- Global [Non Clinical Information Systems Market](#): Overview

Non clinical Information Systems is playing a significant role in the healthcare industries across the globe. Emerging innovative technologies has proved to be the major growth factor in the healthcare IT sector. Non clinical information systems are mainly used in the hospitals, physician's clinic, and laboratories for the administrative functions. These administrative functions don't have any direct effect on the clinical functions. Non clinical information systems help in felicitating the revenue cycle management which provides cost accounting, automatic billing of patients, payroll and claim management. In the past few years, due to the absence of non-clinical information systems, the large numbers of hospitals were facing on an average 4% to 6% loss in the net sales and revenues. Increasing demand from the hospital and related application areas pushed the market for Non-clinical information systems across the globe.

Global Non Clinical Information Systems Market: Applications

In the current era, the non-clinical information systems are playing a crucial role in maintaining the data base of overall administrative functions in the hospitals, clinics, laboratories and others. Non clinical information systems are majorly used to maintain the revenue cycle management. Coming into the existence of non-clinical information systems has increased the efficiency of the hospitals, clinics and others via automation to save money.

Market Research Report

Global Non Clinical Information Systems Market: Market Growth Influencer

Global non clinical information systems market has experienced a prospective growth in the recent past year. The major growing factor that has driven the global non clinical information systems market are the revolution of healthcare industries and declining of Medicaid, Medicare and commercial rate of reimbursement. This factor has forced the hospitals to increase the efficiency in order to save money by implementing the automation system. The technological advancements and increasing in the adoption rate of new as well as updated version has increased the demand for non-clinical information systems. On the other hand, the cost of customization solution is very high and it is very difficult for some low budget hospitals to implement the non-clinical information systems because of the huge expenses incurred. The key challenges which have faced the global non clinical information systems are the resources such as healthcare IT personnel, investment and standard protocols are very scarce which has created the hurdles in the potential market.

Global Non Clinical Information Systems Market: Market Segmentation

For the purpose of this study, MRFR has segmented the global non clinical information systems market into applications, components and deployment. The application segment is divided into Hospitals, Clinics, Laboratories and Ambulatory care solutions and others. The component segment is divided into Service, Software and Hardware. The deployment segment is divided into Web-based, Cloud-based and On-premise.
