

Herpes May Cause Pink Eye; The CBCD Reviews the Medical Evidence

Viral conjunctivitis is the most common form of pink eye; Some forms are caused by the herpes simplex virus. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, May 26, 2016 /EINPresswire.com/ --

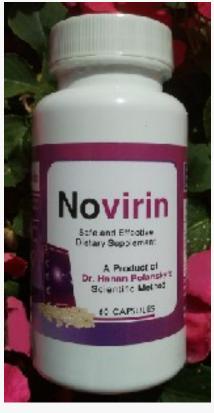

"Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking Gene-Eden-VIR or Novirin." - Greg Bennett, CBCD

The herpes simplex virus can cause multiple conditions if it attacks an individual's eye. One of the more common conditions is conjunctivitis, more commonly known as pink eye. As Emedicine.com notes, "herpes simplex virus-1 (HSV-1) is the most common herpes virus to affect the eyes. This is the same virus that causes cold sores on the lips." (2) "Pinkeye (also called conjunctivitis) is redness and swelling of the conjunctiva, the mucous membrane that lines the eyelid and eye surface. The lining of the eye is usually clear." (1) When complications occur, blindness may be a result.

WebMD notes that when an individual develops viral pinkeye he or she may experience the following symptoms: "redness in the white of the eye, welling of the eyelids, itching or burning feeling of the eyelids, swollen and tender areas in front of the ears, a lot of tearing, clear

or slightly thick, (and) whitish drainage. Viral pinkeye symptoms usually last 5 to 7 days but may last up to 3 weeks and can become ongoing or chronic." (3)

The Center for the Biology of Chronic Disease (CBCD) recommends that individuals concerned about a herpes virus infection take Gene-Eden-VIR or Novirin. The

designed to help the immune system target the latent virus.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the formula is effective against the herpes simplex virus, and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Description of Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with the HSV ... reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (4) The study authors also wrote that, "we observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (4)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites, here:

http://www.gene-eden-vir.com

and

http://www.novirin.com

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims. Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

WebMD also goes further and notes that "viral and bacterial pinkeye are contagious and spread very easily. Since most pinkeye is caused by viruses for which there is usually no medical treatment, preventing its spread is important. Poor hand-washing is the main cause of the spread of pinkeye. Sharing an object, such as a washcloth or towel, with a person who has pinkeye can spread the infection." (5)

What treatments are available against herpes infections?

Until now, drugs approved for the treatment of HSV infections include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, "a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day." (4) Unlike drugs or vaccines, which target the active herpes virus, there are two natural remedies that target the latent HSV. These clinically backed remedies are Novirin and Gene-Eden-VIR.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

"We recommend that individuals who may be concerned about a herpes virus infection take Novirin or Gene-Eden-VIR, which are designed to help the immune system target the latent herpes virus." - Greg Bennett, CBCD
