PUNE, INDIA, May 27, 2016 /EINPresswire.com/
-- About the [Residential and Commercial Security](#) Market

The evolution of smart homes brought an integrated and centralized control of systems installed in homes. Smart homes feature connected systems and devices that include:

- Environmental control systems (air conditioning, heating, and ventilation)
- Household appliances (washing machines, refrigerators, freezers, and microwave ovens)
- Consumer electronics (TVs, gaming consoles, and audio-video equipment)
- Building components (curtains, windows, and doors)

These electronic systems and other household objects are connected to devices such as computer, tablet, or smartphone through a wired or a wireless network to facilitate remote accessibility. Smart homes understand the requirements of occupants based on their lifestyle and preferences and respond in a particular manner. Security is one of the important aspects to be considered in homes, and smart homes provide increased security and alert the owners in case of incidents such as smoke, flooding, or extreme temperatures. Home security systems in smart homes can alert the home owners and possibly stop crimes before they happen and create a greater sense of safety and security.

Analysts forecast the global residential and commercial security market to grow at a CAGR of 15.6% during the period 2016-2020.
