North America accounted for more than 82% of share in global fracking fluid market. The extraction of oil & gas through fracking activities from abundant reserves in North America is driving the market growth. China has significant shale gas reserves and the increasing usage of fracking fluids and chemicals by the Asian unconventional gas development is expected to propel the market growth in Asia Pacific region. To gain competitive advantage, the oil and gas companies in the U.S. are using hydraulic fracturing to develop the shale reserves for oil and gas extraction. Shale gas requires high amount of horizontal drilling to cover a large surface area, thus increasing the production rate of gas which in turn is expected to boost the demand for fracking fluids in horizontal drilling applications. The eco-friendly fluids in nature are expected to provide new growth opportunities.

Global Fracking Fluids Market is segmented by fluid type, by well type, by function type and by geography. Based on fluid type, market is segregated into gelled-oil based fluids, slick water-based fluids and foam-based fluids. Based on well type, market is classified into horizontal and vertical. Based on function type, market is categorized into scale inhibitor, surfactant, gelling agent, acid, friction reducer, clay stabilizer, biocide, cross-linkers, corrosion inhibitor, Ph adjusting agent, breaker, iron control agent, and other fracking chemicals.
