

Do I Really Need A New Air-Conditioner

Unsuspecting home owners often get tricked by A/C technicians telling them they need a new air conditioner when they do not

LAKE WORTH, FLORIDA, UNITED STATES, June 23, 2016 /EINPresswire.com/ -- PRESS RELEASE FOR IMMEDIATE RELEASE

Air-Conditioner Expert Explains How to Avoid Being Duped into Buying a New A/C Unit

LAKE WORTH, FL (June 18, 2016) - With summer only days away, householders in South Florida residents now have a new article to look to just in case their A/C unit breaks in the heat of it all.

A broken air conditioner in the middle of summer is not a very ideal situation. In a rush to get the unit fixed, many unsuspecting owners often get the wool pulled over their eyes by A/C technicians who sometimes tell them they need a new air conditioner when they do not. Often, it is a small part that needs to be replaced.

Written by Air Conditioning expert at Preventative Maintenance Support Services, Kristian Irr, the 'Do I Really Need a New Air-Conditioner' article was written to help A/C owners avoid the hefty expense of new air conditioner, especially if the one they have is fine. The article highlights five common problems with air conditioners and diagnosis instructions.

The problems mentioned in the article are:

- Water all over the floor
- System doesn't start or fully start
- Indoor unit not starting
- Outdoor unit not starting
- System running but not cooling.

To give readers an idea of what to expect in terms of expenses and the scale of the problem, the writer included a useful color code in the article ranging from cheap to costly. Water all over the floor is coded as the cheapest to repair, while the outdoor unit not starting is coded as the most costly.

Located in Lake Worth, Florida, Preventative Maintenance Support Services has been replacing air conditioning systems for over two decades. They have built a solid reputation for providing professional services with integrity.

Several South Florida residents have found an ally in the company, like Azard M. from Plantation, who said: "I am forever grateful to Preventative Maintenance for their honesty and quality of work. We purchased a home ten years ago and all the back rooms were hot and the front rooms were cold. Over the years we called dozens of contractors who all told us that we needed a larger A/C unit. The thing is, we already upgraded to the largest 5 ton unit available. When Kristian came out he explained that the problem was not the size of the air-conditioner, but the lack of an adequate "return path" for the warm air in the back of the house. We hired them to install new returns in each of the back bedrooms. It cost much less than a new air-conditioner and the result is incredible.
