

Polylast Systems, LLC Introduces an Innovative Flooring Solution for the Hospitality Industry

With Microban Antimicrobial Product Protection

SCOTTSDALE, AZ, UNITED STATES, July 11, 2016 /EINPresswire.com/ -- Scottsdale-based [Polylast Systems](#) is introducing a revolutionary flooring solution for the hospitality industry at this year's [Western Foodservice and Hospitality Expo](#) in Los Angeles. The seamless, 100% recycled rubber flooring is treated with [Microban](#) antimicrobial product protection, and provides a low-maintenance option for use in restaurant kitchens, hotels, bars and other commercial spaces.

Polylast flooring systems are easy to install, durable and environmentally friendly. A key benefit for the hospitality industry is that the systems are permanently affixed to the subsurface and can be cleaned in place, providing an alternative to the costly chore of frequent removal and cleaning of rubber mats. In addition to being slip-resistant, Polylast flooring systems also reduce noise and provide a cushioned effect for the comfort of employees and customers.

The Microban technology built-in to the flooring systems at the point of manufacture will not wash off or wear away. By helping prevent the growth of stain and odor causing bacteria, mold and mildew on the floor, Microban antimicrobial product protection keeps the floor cleaner for longer, and helps ensure easier maintenance and greater durability.

"Polylast was founded on the guiding principles of comfort, safety and enhanced performance. These principles all apply in the hospitality industry, especially considering the standards for health and safety that are required to successfully manage a business in the industry," said Polylast founder, Pete Laurence. "Polylast flooring solutions with Microban product protection will save owners and managers time and money, without compromising consistency or performance."

"Microban specializes in partnering with companies to keep products cleaner for longer," said Kevin Parrish, Senior Vice President at Microban International. "Polylast Systems' innovative flooring

solution featuring Microban technology offers the hospitality industry an alternative that has the potential to significantly impact the bottom line, and we are pleased to partner with them as they introduce this product to the industry.”

Each Polylast flooring product can be made in a wide range of colors, absorbencies, rigidities, and finishes, and the company offers a particular advantage in its ability to control every aspect of the application with certainty – guaranteeing production of the perfect product to fit any need.

Attendees at the Western Foodservice and Hospitality Expo August 28-30 will have the opportunity to experience the flooring solution first-hand in the New Product Showcase section of the expo, where a sample of the system will be installed. Polylast is also an exhibitor at the show, located in booth #1320.
