

WDI Device Uses SUREedge® to Efficiently Migrate Workloads to the Nutanix Enterprise Cloud Platform

Key Business Applications from Physical and Virtual Servers Migrated to the Nutanix Enterprise Cloud Platform using Sureline's SUREedge® - Migrator Software

SANTA CLARA, CALIFORNIA, US, July 12, 2016 /EINPresswire.com/ -- Sureline Systems, a leader in physical, virtual and [cloud migration](#) and disaster recovery solutions, announced today that WDI Device, a global provider of Digital Autofocus Sensors, based in Ontario, Canada, used the SUREedge Migrator software to successfully migrate existing services to its newly purchased [Nutanix](#) platform.

After making the decision to move to the Nutanix enterprise cloud platform for performance reasons, WDI began moving their business-critical applications, such as Autodesk, Jira, and Vault from a physical to virtual environment using free migration tools. However, after further analysis and initial deployment, they found the P2V tools they were using caused errors. WDI then decided to move forward with Sureline's SUREedge®-Migrator solution based on several successful migrations completed with other Nutanix customer's critical applications.

Sureline installed SUREedge®- Migrator software remotely into the WDI environment, planned the migration requirements, and then migrated both the physical servers and virtual VM's securely and reliably to Nutanix with AHV. Once the migration to Nutanix on AHV was complete, they were able to validate their applications were running properly.

"I was impressed with the Sureline Systems team. They were very confident, efficient and knowledgeable. I was able to get my work done while they were fixing my problems. My servers are healthy now, and I spend less time managing them and more time providing service, I'm looking forward to purchasing the Sureline DR software solution as well", said Shane Archibald, IT Administrator, WDI Device.

There are many reasons why migrating business-critical applications is challenging:

- Many applications are multi-tier and run on multiple servers
- Often there is large data storage associated which consumes significant network bandwidth
- Data continues to change as the applications are migrated
- There is a very small downtime window available for cut over.

Sureline's SUREedge-Migrator overcomes these challenges with smart data capture, smart migration planning and management, deduplicated and incremental efficient data movement and minimal down time of production applications, ensuring reliable movement of the entire application, its data, and interdependencies.

"Building a robust ecosystem of technology partners has always been a critical part of our journey to

deliver the best experiences to our customers,” said Venugopal Pai, Vice President, Strategic Alliances and Business Development, Nutanix. “By working together with partners like Sureline Systems, we’re able to deliver open, innovative and transformative next-generation IT solutions that can fully leverage the Nutanix enterprise cloud platform, and we’re pleased to have companies like it as part of our Elevate Technology Alliance Partner Program.”

“Sureline is proud to be a Nutanix Elevate Technology Alliance Partner with the SUREedge products verified as Nutanix Ready. With our ability to migrate from any physical server, hypervisor or cloud to Nutanix, we are ideally positioned to help companies such as WDI onboard their existing workloads to Nutanix and AHV”, said Ravi Goyal, CEO, Sureline Systems.

About Sureline Systems

Sureline Systems is headquartered in Santa Clara, CA. Sureline's award winning SUREedge® is a proven enterprise-class software solution for Cloud Migration, Cloud Disaster Recovery, Datacenter Consolidation and Application Mobility. SUREedge reduces risk through secure data transmission, efficient data movement, and reliable movement of the entire application, its data and interdependencies. It is easy to deploy and manage through a single UI, with automated discovery, no agents to install, and is completely non-disruptive. SUREedge is source and destination agnostic working to / from any physical server, any hypervisor (including hyperconverged infrastructure), any cloud, and any storage. Customers worldwide trust SUREedge® to meet their workload migration, disaster recovery and business continuity and application mobility objectives.
