An active data warehouse is capable of integrating data changes while maintaining batch or cycle refreshes. The Active Data Warehouse professionals are often addressed as Data Warehouse Architects, who are capable of handling enormous amount of complex data from different sources. Traditional Data Warehouse were primarily deployed by the organizations to support strategic Business Intelligence (BI) for a few decision-makers that were responsible for strategic planning. However, in order to gain competitive advantage more and more businesses are keen to use the data at operational level. The major driver in adoption of Active Data Warehousing among the companies is the phenomenal growth of Big Data Analytics and BI. In addition, businesses today have realized the importance of empowering the middle management, and the ground staff with support, to help them with tactical decisions.
