PUNE, INDIA, July 21, 2016 /EINPresswire.com/ -- [Big Data Infrastructure Market](#)

## Summary

Big data refers to a wide range of hardware, software, and services required for processing and analyzing enterprise data that is too large for traditional data processing tools to manage. In this report, we have included big data infrastructure, which includes mainly hardware and embedded software. These data are generated from various sources such as mobile devices, digital repositories, and enterprise applications, and their size ranges from terabytes to exabytes. Big data solutions have a wide range of applications such as analysis of conversations in social networking websites, fraud management in the financial services sector, and disease diagnosis in the healthcare sector.
