*Latest News on Mass Spectrometry Industry Global Research Report 2016*

PUNE, INDIA, July 21, 2016 /EINPresswire.com/ -- Analysts forecast the Global [Mass Spectrometry](#) Market to grow at a CAGR of 8.16% during the period 2016-2020.

## Summary

### Mass Spectrometry Industry

Mass spectrometry is a technique commonly employed in chemistry to ascertain the amount and type of chemicals present in a test sample. This is done by measuring the mass-to-charge ratio and the abundance of gas phase ions in the sample. The estimation of the mass-to-charge proportion is made on the premise of a mass range, which is a plotted form of the particle signals. The mass spectrum is the major source through which one can determine the following:

- The nature of the sample — whether the sample is isotopic or elemental
- The mass of the particles and molecules in the sample
- The chemical structure of the molecules in the sample
