PUNE, INDIA, July 26, 2016 /EINPresswire.com/ -- COMPLETE REPORT DETAILS @ <https://www.wiseguyreports.com/reports/39858-urinary-slings-market-in-the-us-2015-2019>

Urinary incontinence slings are flexible surgical mesh systems that are placed surgically to restore the urethra to its normal position and efficiently minimize incontinence. A sling procedure uses strips of the body's tissue or synthetic mesh to create a hammock-like fixture that wraps around the bladder neck and a tube that transports urine from the bladder. Urinary incontinence slings are also called urethral support slings. [Urinary slings](#) are of two major types: trans obturator tape sling and tension-free vaginal tape sling. These slings are used in the surgical incontinence for treating stress urinary incontinence.

The analysts forecast the Urinary Slings market in the US to grow at a CAGR of 11.85 percent over the period 2014-2019.
