Market Scenario:

Organ transplantation is an effective treatment for end-stage organ failure and is extensively practiced around the world. The access of patients to organ transplantation, however, changes as per their national situations, and is partly dictated by the expense of human services, the level of specialized capacity, above all, the accessibility of organs.

The lack of organs is virtually a universal problem. In a few nations, the improvement of a deceased donation program system is hampered by socio cultural, legitimate and different variables. Even in developed nations, where rates of deceased organ donations have a tendency to be higher than in other developing countries, organs from this source fail to meet the increasing demand.

According to National Kidney Foundation there are over 121,678 people waiting for organ transplant out of which 100,791 await kidney transplant in US. The level of global demand for organ transplant will play a major role in the growth of the organ transplant market and will help the market grow at a tremendous rate.

Segments:

Global Organ transplantation Market has been segmented on the basis of types which include kidney, liver, heart, lungs and others. On the basis of products which consists of instruments and software. On the basis of commercialized products Zenapax, Prograf, Cellcept, Myfortic, Neoral. On the basis of end users hospitals, transplant centers and research laboratories.S
