Actuation systems form an integral part of military aircraft, controlling a broad range of applications. Almost every movable part has an actuator, which performs various functions such as extension and retraction of landing gears, monitoring and controlling velocity, and controlling engine speed by adjusting levers and flaps. These systems are operated by different sources of energy such as electricity, hydraulic fluid pressure, or pneumatic pressure, which convert energy into motion. Actuators are safety-critical systems, particularly when individuals could be catastrophically affected by failures within the aircraft.

The analysts forecast the Global [Military Aircraft Actuation Systems](#) Market to grow at a CAGR of 2.92% during the period 2016-2020.
