The [sports medicine](#) market consists of products used by athletes or sportspersons to prevent injuries and protect themselves including devices that boost performance. The product offerings play a crucial role in the rehabilitation, recovery, endurance, and monitoring of athletes in sports.

Increasing incidences of sports injuries worldwide coupled with continuous influx of advanced products and treatment modalities along with R&D developments in Sports Medicine are the factors that are expected to boost the growth of the market. Technological advancements related to regenerative medicine along with acceptance of arthroscopy & Procedures which are minimally invasive are likely to foster the market growth. High cost of implants and other devices along with high excise tax in the U.S. may likely restrain the growth of the market. Launch of generic implants along with market demand across emerging economies is expected to provide abundant growth opportunities in the market.
