Kenandy Demonstrates Commitment to Excellence by Achieving Service Organization Controls (SOC 2) Certification

REDWOOD CITY, CA, UNITED STATES, August 3, 2016 /EINPresswire.com/ -- Kenandy Inc., a cloud enterprise resource planning (ERP) solution built natively on the Salesforce platform, today announced that it has successfully completed and received the Service Organization Controls (SOC) 2 Type II certification. This rigorous auditing process demonstrates that Kenandy adheres to the highest standards for security, availability, confidentiality and processing integrity controls in the cloud ERP industry.

"Compliance with the SOC 2 standard requires the most stringent internal policies related to software development, storing and accessing data and security over all systems and their related hardware," said Stephen Cumming, CFO at Kenandy, "Our SOC 2 certification provides assurance to our customers that the company has appropriate and effective internal controls in place."

SOC is an internationally recognized auditing standard developed by the American Institute of Certified Public Accountants. The SOC 2 Type II certification is performed by an independent auditing firm and examines the controls and processes involved in storing, handling, and transmitting data securely. The successful completion of the voluntary engagement illustrates Kenandy's commitment to maintain the most stringent controls for the security of its clients' confidential information.

SOC 2 certifications are intended to help service organizations build trust and confidence in their service delivery processes and controls.
