Wiseguyreports.Com Adds “Energy Harvesting Devices -Market Demand, Growth, Opportunities and analysis of Top Key Player Forecast to 2021” To Its Research Database

Energy harvesting devices are devices that convert ambient energy, such as solar, wind, and chemical energy, into electrical energy. During the energy harvesting process, a transducer is used to convert ambient energy into electrical energy. The amount of electrical energy produced is small, but it can be used for low-power applications. Some of the energy harvesting devices discussed in this report are wireless sensor nodes, wrist watches, and solar-plated mobile phones. Energy harvesting devices allow electronic products to work as contactless charging devices, which make the products highly efficient and reliable.

The analysts forecast the global energy harvesting devices market to grow at a CAGR of 21.97% in terms of revenue and 25.91% in term of unit shipments over the period 2014-2019.
