According to the report, Introduction of trade policies in phenolic resins is a key trend for this market. Governments of different countries, especially the American and APAC countries, are taking many initiatives to improving trade policies by introducing FTAs across geographical boundaries. FTAs reduce barriers on exports and improve trade opportunities. This helps in expanding phenolic resins across nations.

Also the report states that, the high mechanical strengths, low toxicity, heat resistance, low smoke and other several properties has made the phenolic resins to make their use in the applications such as in laminations, wood adhesives, molding compound, construction, automobile and others. Growing demand of these applications has increased the production of phenolic resins to meet the current market demand. Also, phenolic resins is used in flame retardant which is very crucial for automobiles and aircrafts. Owing to these factors, the global phenolic resins market is expecting a potential demand.
