

New Kickstarter Campaign to Fund Discrete Active Noise Cancellation Device called Tranquil

Medical grade technology used in active and passive noise cancellation device that fits behind your ear and is completely unnoticeable.

PRIOR LAKE, MINNESOTA, UNITED STATES, August 29, 2016

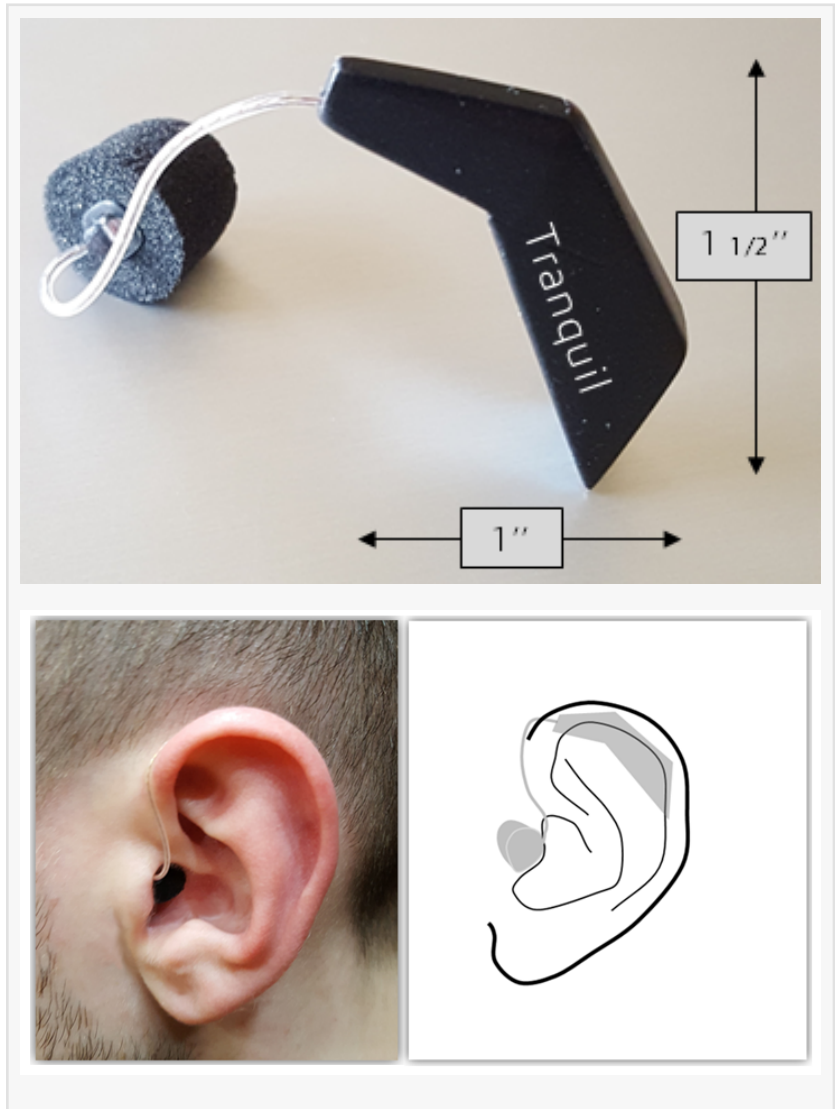

/EINPresswire.com/ -- Local father and son team from Minneapolis, Minnesota launches Kickstarter campaign for a brand new device to combat noises encountered in your everyday life. Tad Ell, the inventor of [Tranquil](#), compared his device to similar products on the market but wanted to add features not found on the other products. "It was given the name Tranquil to elicit thoughts of peace and tranquility for almost any noisy situation we face today in our busy lives", stated Tad Ell.

This new device uses active and passive noise cancellation and has multiple modes unlike any other product available. The multiple modes are; Quiet Mode, Voice Mode and Sleep Mode. QUIET MODE is activated for when the user wants near total silence, SLEEP MODE masks noises while you sleep if you are easily awoken by snoring, and

VOICE MODE can be used in a loud and noisy environment but still allows you to hear a person talking, like when traveling by airplane.

Tranquil's sleek and small design is constructed to fit snugly and comfortably behind the ear, appearing almost invisible to someone sitting next to you. A small cable runs from the part behind the ear and wraps around into your ear canal with a soft memory foam tip making it extremely comfortable to wear for extended period of time.

The Kickstarter campaign has a goal of \$65,000 with roughly one month to go before it is finished. "If funding is successful, it will all go into finalizing the industrial design and production of Tranquil" said Tad Ell. Backers who pledge the early bird special can save up to 40% on the price. The full package includes two Tranquil devices, a travel case, charging cord and three sets of different size foam tips to

fit all ear sizes/shapes.
