

Urinary Catheters Market 2016 Share, Trend, Segmentation and Forecast to 2021

Global Urinary Catheters Market 2016 Analysis and Forecast to 2021

PUNE, INDIA, September 6, 2016 /EINPresswire.com/ -- In urinary catheterization a latex, polyurethane, or silicone tube known as a urinary catheter is inserted into a patient's bladder via the urethra. Catheterization allows the patient's urine to drain freely from the bladder for collection. It may be used to inject liquids used for treatment or diagnosis of bladder conditions. A clinician, often a nurse, usually performs the procedure, but self-catheterization is also possible. The catheter may be a permanent one (indwelling catheter), or an intermittent catheter removed after each catheterization. A urinary catheter is a tube placed in the body to drain and collect urine from the bladder.
