

Tried and tested tools streamline ISO 27001 ISMS implementation, says IT Governance

ELY, CAMBRIDGESHIRE, UNITED KINGDOM, September 7, 2016 /EINPresswire.com/ -- IT Governance, the leading provider of IT GRC documentation toolkits and ISO 27001 solutions, is encouraging organisations to use tried and tested tools such as the [ISO 27001 ISMS Documentation Toolkit](#) to streamline the process of implementing an ISO 27001-compliant information security management system (ISMS).

Alan Calder, founder and chief executive officer of IT Governance, said: "Our documentation toolkits have been used by organisations worldwide to achieve certification to various management system standards. IT Governance's ISMS toolkits have been developed by ISO 27001 practitioners to provide organisations with the help and guidance to implement ISO 27001 without having to create policies and procedures from scratch, saving information security teams and ISO 27001 implementers valuable time and costly resources."

The ISO 27001 ISMS Documentation Toolkit is designed to help organisations address all of the ISO 27001 control areas. It provides pre-written policy and procedure templates that cover all of the Standard's key compliance issues. The toolkit can help organisations create ISO 27001-compliant documents effortlessly and cost-effectively, accelerating the ISMS project.

In addition to the pre-written documentation, the toolkit includes project tools to compare the organisation's security stance against the Standard's requirements at every stage of the ISO 27001 implementation project.

These templates and project tools are included along with a selection of tools and resources in IT Governance's No 1 ISO 27001 Complete ISMS Toolkit, No 2 Integrated ISO 27001 ISMS Toolkit and No 3 Comprehensive ISO 27001 ISMS Toolkit.

The ISO 27001 Documentation Toolkit includes a new standalone Statement of Applicability (SoA) tool, supporting procedures and work instructions, an information security manual, map and structure documentation in Visio, and pre-written documents created by ISO 27001 experts. It can also be fully integrated with the risk management tool, vsRiskTM.

The toolkit also contains a documentation dashboard and a gap analysis tool for ISO 27001:2013 requirements and controls to help ISO 27001 implementation teams track the ISMS project progress and conduct the initial assessment.
