The IOS app Investagate's purpose is to give users the ability to quickly learn and understand the stock market.

LONDON, UNITED KINGDOM, September 7, 2016

/EINPresswire.com/ -- In order to learn about stocks and the markets. An individual would usually go online and look up the financial terms and when searching, will be presented with many websites explaining the term. As always, the explanations on these websites are detailed but these websites all have one thing in common. They always provide a universal example for their website visitors. The visitors will then need to go and apply this to a company he/ she are interested in.

Investagate app's uniqueness is that you get an explanation of all the financial terms in detail and the example will always be based on the company you have chosen in the app. All financial terms (items) are clickable and will open to our own webpage in an in-app browser explaining the term and what the term means for the company you have selected in the app.

This will allow anyone regardless of their background to quickly and easily be able to analyse a company that trades on the stock market.

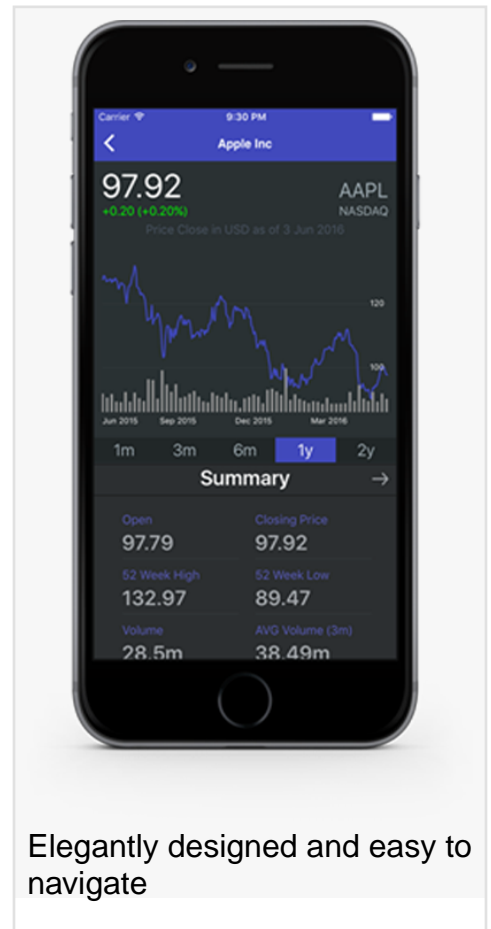

Just by clicking on and going through the terms in the app will give the user an understanding of how good of an investment the company is.
