[Global Infusion Systems Market Research Report- Forecast To 2027](#)

An infusion system is a device, and any associated disposables, used to deliver fluids or drugs in solution to the patient. The common routes are: intravenous, subcutaneous, epidural or enteral. The simplest devices, gravity controllers, employ a clamping action to vary the flow of liquid under the force of gravity. More complex systems use a positive pumping action for infusion. The infusion systems are used in almost all the treatments. The infusion systems are required in high volume on a daily basis. As the number of clinics and hospitals is increasing globally, the requirement of the infusion systems will increase multiple times. Market for infusion systems is

growing rapidly.
