Key Findings

- Global and regional cloud services will continue to evolve in terms of both technology development and ongoing progress in go-to-market strategies and business models.
- Cloud services are reaching a new stage, as mainstream enterprises begin to consider longer-term strategies and operationally important workloads for on-demand environments.
- Providers are still struggling with how to grow revenues successfully in cloud. For some, this means refocusing their efforts on specific types customers (e.g. particular verticals), and retrenching to build integrated solutions that meet customers' technical and compliance requirements. Elsewhere, providers are deciding to divest cloud from other business units: HP and CSC are two examples. In still other cases, the provider make acquisitions to fill in gaps in its portfolio (e.g., VMware's Virtustream acquisition).
- Cloud providers are also considering how they can help customers preserve their legacy investments while modernizing their infrastructures. This paves the way for hybrid IT approaches, in which they support remote infrastructure management, and continue to sell conventional colocation and hosting services.
