The analysts forecast the global [smart communities market to grow at a CAGR of 18.26%](#) during the period 2016-2020.

Unprecedented urban development, growing populations, and climate changes globally are putting pressure on governments, local communities, and agencies to enhance the quality of public services. Cities worldwide are expanding and such expansion is generating demand for advanced infrastructure (such as better healthcare, transportation systems, and renewable energy solutions). Recurring instances of extreme climatic conditions and shrinking natural and non-renewable resources are raising conservation concerns. Therefore, cities and local communities need to design frameworks and policies that enable smart, sustainable, economic, and environmental development.
