Description

Wiseguyreports.Com Adds "Head-mounted Display -Market Demand, Growth, Opportunities and analysis of Top Key Player Forecast to 2021" To Its Research Database

HMDs are AR devices that display images through small optic computer displays. These display devices are worn on the head like a helmet with optic computer displays in front of one eye or separate optic computer displays for each eye. HMDs consist of an image source, collimating optics, and a mechanism to mount the device onto the head. These displays are being used in many applications such as medical visualization, for viewing sensor imagery in military vehicles, airborne workstations for aircraft simulation and training, and fixed and rotary wing avionics. HMDs can be used in VR as well as AR applications.
