IT Governance launches partnership programme to extend distribution of information and cyber security solutions

ELY, CAMBRIDGESHIRE, UNITED KINGDOM, September 14, 2016 /EINPresswire.com/ -- IT Governance, the global provider of cyber security management expertise, is pleased to announce the launch of its new partnership programme to expand distribution of information and cyber security solutions to organisations worldwide.

Alan Calder, the founder and chief executive officer of IT Governance, said: "We're pleased to announce the launch of our new partnership programme. With the UK Government backing the Cyber Essentials scheme and the EU General Data Protection Regulation coming into force in mid-2018, there has never been a better time for organisations to take advantage of the opportunities a partnership with IT Governance brings."

The new IT Governance partnership programme is designed to provide organisations with the opportunity to deliver IT Governance products and services direct to their clients.

"Having led the first information security standard implementation, we are committed to helping our partners protect themselves and their customers from the continuously evolving cyber threats. We are confident that our industry expertise and pragmatic approach to information security will help our partners and clients improve their defences and make strategic decisions that will benefit the entire business," Alan Calder continued.

Organisations wishing to become an IT Governance partner will also benefit from marketing, communications and sales support in distributing IT Governance's information and cyber security solutions. In addition to this support, partners benefit from commissions, as well as access to a content library, discounts, and data protection and information security webinars.

To help partners train and certify in the solutions they provide to their clients, IT Governance offers partner discounts on all products and services.

IT Governance is a one-stop shop for any organisation's IT governance, risk management and compliance (GRC) needs with a special focus on cyber resilience, data protection, the PCI DSS, ISO 27001 and cyber security.
