

Global In Vitro Fertilization (IVF) Market 2016 Analysis and Forecast to 2022

In vitro fertilization (IVF) is the process of artificial fertilization which happens outside the women's body.

PUNE, INDIA, September 15, 2016 /EINPresswire.com/ -- [Global In Vitro Fertilization \(IVF\) Industry](#)

In vitro fertilization (IVF) is the process of artificial fertilization which happens outside the women's body. The egg of the women is surgically removed and are fertilized by a sperm in a laboratory. In vitro fertilization is mainly used by women having a problem in conceiving. However, IVF does not always result in pregnancy and success rate varies from individual to individual. IVF procedures have emerged as a preferable choice for the fertility treatments in clinical industry. The market is poised to witness a remarkable growth, primarily due to the related technological advancements such as pre-implantation genetic diagnosis (PGD) and three-parent IVF procedures.

Try Sample Report @ <https://www.wiseguyreports.com/sample-request/639981-in-vitro-fertilization-ivf-forecast-2014-2022>

The world IVF market accounted for \$9,015 million in 2015 and is projected to garner revenues worth \$17,714 million by 2022, registering a CAGR of 10.2% over the forecast period. The growth of the market is attributed to the reduced conceiving rates, delayed pregnancy, changing lifestyle conditions and fertility disorders are the major factors that drive the market growth. Other factors such as favourable reimbursement scenario and delayed parenthood opted by couples due to professional and financial constraints will also help in the growth of the market. On the other hand, barriers such as ethical concerns in particular countries with respect to IVF, high cost of the IVF procedures followed by low awareness, especially in under-developed economies such as Nigeria are likely to restrain the market growth.

Rising initiatives towards commercialization of cost-efficient treatments and emerging medical tourism, mainly in developing nations would offer lucrative growth opportunities for IVF service providers in future. Further, the growing clinical research initiatives for the development of novel IVF technologies would provide a platform for growth of the global IVF market.

The world IVF market is segmented on the basis of cycle type, end users and geography. Based on cycle types, the market is segmented into fresh cycle (non-donor), thawed IVF cycle (non-donor) and donor egg IVF cycles. Fresh cycle (non-donor) is both the highest revenue generating segment as well as the highest growing segment as it is the most commonly adopted method in a IVF process due to high success rate. Similarly, by end users, the market is further segmented into fertility clinics, hospitals, surgical centers and clinical research institutes. In terms of geography, the market is segmented into North America, Europe, Asia-Pacific (APAC) and Latin America, Middle East and Africa (LAMEA).

The Europe IVF market is the leading region in terms of revenue, whereas Asia Pacific is the

fastest growing region, owing to growing demand for IVF processes. In terms of number of IVF cycles performed, the Asia-Pacific region dominates the global IVF market. Asia Pacific IVF market is set to grow at a promising CAGR of 13.3% from 2016 to 2022, due to factors such as wide availability of IVF clinics, high IVF success rates and the rising trend of fertility tourism. In Asia-Pacific region, Japan is the leading country accounting for majority of the market share and is expected to maintain its position throughout the analysis period.
