Wearable Health Sensors such as accelerometers, gyroscopes and other motion sensors are expected to be incorporated into activity monitors, fitness devices, pedometers, golf and tennis swing analysis tools, and sports kinetics applications. Health and Fitness wearable sensors now stream data to smartphones via low-power wireless interfaces and deliver real-time data to a wide variety of smartphone health and fitness applications. Leveraging wireless connectivity, powerful application processing and storage capabilities in smartphones, wearable sensors are finding new use cases such as remote patient monitoring, where the patient's motion data analysis can be sent directly to the physician. The growth of the wearable health sensors market is currently being hindered by dearth of common standards and interoperability issues and high cost.

The Wearable Health Sensors market is estimated at \$48.63 million by 2018 at a CAGR of 42.89% over the period 2014-2020. The miniaturization of physiological sensors, rising growth towards advanced functions sensors in smart gadgets, and improvement in the battery sizes are the key drivers which are making the wearable health sensors market to grow lucratively.

The Global Wearable Health Sensors Market is segmented on the basis of Type (Accelerometers, Gyroscopes, Motion, and Others), Industry (Healthcare, Consumer Applications, Sports/Fitness, Industrial, Entertainment & Media, and Others), and Geography (North America, Europe, Asia Pacific, Middle East Africa, and Latin America).
