Global CMOS Image Sensors Market 2016 Analysis and Forecast to 2022

PUNE, INDIA, September 19, 2016

/EINPresswire.com/ -- CMOS technologies are based on arrays of light sensitive pixels, which gather photons of light and convert them to a visible image. CMOS Sensors use multiple transistors to amplify and move the charge provided by incoming photons of light, enabling the pixels to be read individually. CMOS image Sensor applications are growing at a phenomenal rate by the year. The growth of the [CMOS Image Sensors](#) Market is currently being hindered by Complex manufacturing process of High Resolution Image Sensors. The Asia Pacific region is expected to estimate a huge growth rate when compared to other regions because of the presence of developing countries such as China & India, followed by North America and Europe.
