TUCSON, AZ, USA, September 23, 2016 /EINPresswire.com/ -- Cycligent announces the public release of Cycligent Git Tool which makes it easier to work with Git through a visual representation of a repository. Cycligent Git Tool's key differentiators are:

- Graphical flow of a Git repo with status and clickable actions
- Easy, fast and en masse submodule/microservices actions and status
- One-click cloud activation of any Git branch
- Cross platform

Anyone who wants to use Cycligent Git Tool can freely download it from www.cycligent.com/git-tool. Instructional videos and documentation can be accessed from within the tool. Additional step-by-step demonstrations can be found on Cycligent's blog at www.cycligent.com/blog.

"While we developed Cycligent Git Tool to help us work with more complex Git repositories, especially those containing numerous submodules or microservices, we found that it worked well for our smaller projects as well. It simply made seeing and acting on the state of a Git repository easier," said Frank Garcia, CEO and Founder of Cycligent. "After offering the tool to hundreds of other developers over the past three months during our closed beta we are thrilled to hear from them that they find the tool useful and exciting. We are, therefore, making Cycligent Git Tool available to the general public."

Cycligent provides Cycligent Git Tool free of charge in order to highlight its cloud offering. Cycligent Cloud allows developers to activate any Git repository branch in the cloud with the click of a button. Developers no longer have to code cloud plumbing, such as message busses. Without changes to code Cycligent automatically provides existing web applications with cloud capabilities such as load balancing, horizontal scaling, competing consumers, fault tolerance and performance resilience. A free 30-day trial of Cycligent Cloud is available at www.cycligent.com.

Should you need assistance, Cycligent's engineers are available to assist with projects of all types but are experts in JavaScript and TypeScript with an emphasis on Angular 2, Node and MongoDB.
