

## After the Hurricanes

*There are Real Heroes up the Pole*

WASHINGTON, D.C., USA, October 17, 2016 /EINPresswire.com/ -- After the Hurricane, There Are Real Heroes up the Pole

By Llewellyn King

From across the nation an army of men, and a few women, is on the move. They are deployed with tools and gauges, maps and their own know-how in a critical battle. They are shock troops fighting the flooding in North and South Carolina.

They are electricity linemen.

Real Heroes Up the Pole

When disaster strikes, the nation's electric utilities spring into action, sending equipment — which can range from temporary lighting to the familiar bucket trucks — hundreds and thousands of miles to the battle.

“

When the lights go off, life as most of us know stops. It does not grind to a slow halt, it stops.

*Llewellyn King, Host-White House Chronicle*

When these first responders reach the site of disaster, they go to work down manholes and up poles, struggle with knotted wires and fallen trees.

The work is hard and the conditions are dangerous, but there is a camaraderie that binds linemen from different localities in a common purpose and danger. Those who more usually might rely on a bucket truck, in fine conditions, take out their climbing gear and up the pole they go.

The constant danger is electricity itself: the threat of electrocution. Up the pole, there are many other dangers. The pole may be weakened and critters seeking safety may be up there, from raccoons to venomous snakes.

When the lights go off, life as most of us know stops. It does not grind to a slow halt, it stops. Elevators, air conditioners, heating systems, ovens, refrigerators, televisions and computers are stranded. Even the pumps for removing water from a flooded basement need electricity.

Everyone knows that in an emergency, it is vital to restore the juice. The linemen, often several sleeping in a single motel room or in their trucks, are the heroes who work as many as 19 hours straight to do that.

It is rewarding, exacting and well-paid work. A spokesman for the American Public Power Association explains that pay varies, depending on the part of the country, but \$100,00 a year is common and earnings shoot up with overtime, as in emergencies. The association represents more than 2,000 publicly owned utilities, serving about 14 percent of the nation's electricity consumers.

So it is astounding that for a number of years both the publicly owned and the large, investor-owned utilities, which the Edison Electric Institute represents and account for 80 percent of the power supply, have been having a devil of a time finding workers prepared for a very secure life that has its moments of high drama — as is the case right now with the crews restoring power to areas devastated by Hurricane Matthew.

The problem is that even the most enthusiastic young person cannot just go up a pole without a lot of training: four years of training.

In the world of labor, electric utilities are not the only ones gasping for help. There is an artisan labor shortage and it is worsening. One truck operator reckons there are vacancies for at least 50,000 truck drivers. Similar shortages exist for electricians, pipe-fitters, sheet metal workers, stone masons, welders and many other skilled artisans.

If all the manufacturing jobs that politicians say they would like to bring back to the United States were to arrive next year, there would be no workers to build the factories, nor a trained workforce to make the goods. The unemployment crisis — so emphasized in this election year — is with the unskilled.

Part of the artisan problem may be that too many young men and women are being herded into colleges without any knowledge of alternatives for which they might have more aptitude and interest. More college is always seen as a virtue. But who needs four years of college to become an Uber driver?

When the APPA tried recruiting in high schools with a video, they found teachers trashed the video. Schools are rated on how many graduates go on to college, not on to training in trades offering job security and satisfaction.

There is a future up the pole.
