Analysis and Forecast to 2021*

PUNE, INDIA, October 18, 2016

/EINPresswire.com/ -- [Geomembranes](#)

are protective films that function as a barrier in outdoor, man-made containment areas. Geomembranes are applied over soil to keep water and other liquids from penetrating into and out of the soil surrounding the containment area. Typical geomembrane applications include waste water storage, agricultural and decorative ponds, recreational lakes, canal linings, and tunnel membranes, landfill sites, waterproofing of artificial waterways, pool and pond liners. The predominant plastics used as geomembranes are polyolefins and PVC. The most important performance requirement for geomembranes is the retention of mechanical properties for extremely long periods of time.
