Regenerative medicine deals with the process of using therapeutically induced or laboratory-grown human tissue to treat damaged or diseased human cells, tissues, or organs. It focuses on repairing, replacing, or regenerating damaged cells, and thus offers a paradigm shift in healthcare treatment. The three main technologies used in regenerative medicine are small molecules and biologics, gene therapy, and cell therapy. Small molecules and biologics help in the regeneration of diseased cells and tissues, whereas cell therapy helps in treating the functioning of existing cells.

Research analysts forecast the regenerative medicine market in Japan to grow at a CAGR of 35.3% during the period 2016-2020.
