MARKET RESEARCH

Key Findings

- Bioethanol forms 95% of renewable chemicals market
- Polylactic acid (PLA) and polyhydroxyalkanoates (PHA) are the major biopolymers in the market
- Bio-based succinic acid and iso-butanol hold the highest growth potential
- The major factors accelerating the growth of renewable chemicals are the availability of low cost feedstock and the

increasing awareness about eco-friendly products

 Performance and cost competitiveness with traditional fuels form the major restraining factors for the renewable chemicals

Study Objectives of Renewable Chemicals Market

- To provide detailed analysis of the market structure along with forecast for the next 5 years of the various segments and sub-segments of the Global Renewable Chemicals Market
- To provide insights about factors affecting the market growth
- To Analyse the Global Renewable Chemicals Market based on various factors- price analysis, supply chain analysis, porter's five force analysis etc.
- To provide historical and forecast revenue of the market segments and sub-segments with respect to four main geographies and their countries- North America, Europe, Asia, and Rest of the World (ROW)
- To provide country-level analysis of the market with respect to the current market size and future prospective
- To provide country-level analysis of the market for segment by types and applications
- To provide strategic profiling of key players in the market, comprehensively analysing their core competencies, and drawing a competitive landscape for the market
- To track and analyse competitive developments such as joint ventures, strategic alliances, mergers and acquisitions, new product developments, and research and developments in the Global Renewable Chemicals Market.
