

[One Day Live Training] Mixing In Stirred Tanks - Dublin, Ireland - November 08, 2016

Mixing in Stirred Tanks - a one day training to enable chemical engineers with the latest mixing and scale-up methods in the chemical process industry space.

DUBLIN, DUBLIN, IRELAND, October 27, 2016 /EINPresswire.com/ -- Tridiagonal Solutions Inc, is organizing [Mixing in Stirred Tanks](#) - a one day training program to enable chemist and chemical engineers with the latest mixing calculations and scale-up methods in the chemical process industry space.

MIXING IN STIRRED TANKS

November 08, 2016 | Dublin, Ireland

Click Here To Register

The banner features two 3D visualizations of stirred tanks on either side of the central text. The left visualization shows a cross-section of a tank with a central stirrer and colored regions representing different flow or concentration zones. The right visualization shows a similar cross-section with a different internal structure or flow pattern, also with colored regions.

This course will review principles of mixing in stirred tanks, provide recommendations for process design and scale-up, plus enable participants to apply these principles and recommendations to their mixing processes and problems. Additionally the course will explain how “MixIT – an enterprise software to predict stirred tank performance” can help facilitate knowledge management, collaboration and use of mixing science within a global organization to accelerate reactor design, process scale up, process optimization and troubleshooting associated with stirred tanks.

The training is taking place on Tuesday, November 08, 2016, 8 am IST at New Horizons Ireland, Strand House, 24 Strand Street Great, Dublin 1, Ireland. Registration instructions are available at <http://mixit.tridiagonal.com/mixing-in-stirred-tanks-dublin-ireland-one-day-training-november-08>

The training is conducted by Dr. Ameya Durve and Tarang Bulchandani, who are members of the Chemical Reactor Engineering Group at Tridiagonal Solutions. Over the past years of their career, they have been focused on R&D, Design and Scale up of stirred tank reactors. Their work also includes topics on gas-liquid and solid-liquid flows in stirred tank reactors using experimental methods and computational modeling.
