

# Global IP Networks Announce Security-As-A-Service

*Protecting enterprises from DDoS and application attacks with Radware*

DALLAS, TX, UNITED STATES, November 1, 2016 /EINPresswire.com/ -- Global IP Networks ([www.gipnetworks.com](http://www.gipnetworks.com)) announced today its partnership with Radware, to deliver 'Battle Proven Security-as-a-Service'. Global IP Networks will leverage Radware technology to protect its customers from the most sophisticated threats and attacks. The service provides real-time cloud protection for distributed denial of service (DDoS) and web security threats via best-in-class web application firewall (WAF) and DDoS protection technology and expertise.

Distributed denial of service and application level attacks continue to cause severe service interruptions and financial damages to organizations. Radware's Global Application and Network Security Report revealed that over 50% of organizations have experienced some type of DDoS attack in the past year. Yet, as much as 50% of the organizations cited that they are unprepared for such attacks. DDoS attacks are increasing in quantity and severity as these attacks become increasingly complex and persistent. Attack complexity requires sophisticated technologies to ensure immediate and accurate detection and mitigation of cyber-attacks. Security-as-a-service must be based on best-of-breed WAF and DDoS protection technologies that include behavioral-based detection technology, real-time signature creation, and device fingerprinting for sophisticated web application protection backed by a 24/7 battle-proven emergency response team.

"Given the growing volume of attacks observed in the enterprise and the undeniable demand for additional security, cloud service providers must be able to deliver the expertise backed by proven technology to protect their customers," said Jim Smith, Director of Cloud Partner Development of Radware. "Global IP Networks' introduction of cloud-based security services with Radware builds on a proven platform to expand their portfolio of cost-effective services to deliver safe and secure networks."

"Security is an ongoing concern within many organizations and how best to prepare for certain threats is continually a topic of conversation. Global IP Networks is excited about our strategic partnership with Radware. We look forward to working with this exceptional organization and offering as a solution their products and services." Said Chris Martin, Senior Vice President.

Global IP Networks, is a carrier neutral data center that provides robust security and quality infrastructure for mission critical sectors such as financial, health care, oil and gas, education, and telecommunication enterprises. Global IP Networks is qualified in SSAE 16 SOC-2 Type II, compliant and audited HIPAA and PCI. Global IP Networks along with its unrivaled customer service and reliability offers a variety of services (colocation, cloud, managed service, network monitoring and data storage) to fit clients' needs. Conveniently located in Dallas and Plano, Global IP Networks offers business continuity centers that are available to clients 24 hours a day 365 days a year.
