# New IRI Service Providers Cover More Data Integration and Governance Ground

Voracity Platform Partners are Growing Technical Depth and Geographic Coverage

MELBOURNE, FL, UNITED STATES, November 1, 2016 /EINPresswire.com/ -- Innovative Routines International (IRI), The CoSort Company, announced the first 10 in a growing list of new commercial licensing and support offices in Europe, Asia, and North America. IRI is currently building a "deep bench" of new implementation services for its big data management products and one-stop-solution-platform, Voracity.

Voracity uses IRI CoSort or Hadoop engines to power data discovery, integration, migration, governance, and analytics. Voracity's Eclipse IDE centralizes these activities for enterprise

IRI Voracity - ETL Platform to Discover, Integrate, Migrate, Govern, and Analyze Data

data and ETL architects, DBAs, compliance officers, and data scientists.

The new consultative channel partners expand IRI's support reach into more than 45 countries. According to IRI Business Development VP David Friedland, "these consultancies are subject matter experts who also understand how Voracity or component IRI products uniquely address the performance, complexity, and financial challenges inherent in VLDB and data warehouse operations, BI and analytic tool data preparation, and data security and governance initiatives.

As the adoption of Voracity grows, and its proven components like CoSort and FieldShield continue to add value at cost-conscious sites with big or sensitive data, IRI is enhancing local support options by adding these corporate partners:

Canada - IntegrationWorx (DW ETL), KD Design (Governance)
EMEA - Kapsch Group Romania & Sendatex Belgium (Governance / Data Masking)
Philippines - Bridges Southeast (BI/DW), PatchVantage (Governance)
Taiwan - Yampong (Legacy Migration), Syscom (Governance)
US - BigData Dimension (Big Data, BI/DW), IT KeySource (DW ETL

According to Friedland, these new consultancies add to an already large network of authorized representatives and service providers licensing and implementing IRI software solutions to modern big data problems. "We continue to work diligently to identify and nurture teams who are technically

qualified and philosophically aligned with customer-centric, simplifying solutions. Each partner recognizes the technical and business environments of their customers, knows how to use IRI software to improve their speed and security, and drive down their costs."

About IRI, The CoSort Company
Founded in 1978, IRI develops high-performance software for managing and protecting big data in: legacy migration, BI/DW, and application development environments. Within the Voracity platform, and standalone solutions, are core IRI products like: CoSort for sorting, transformation, and reporting; FACT (Fast Extract) for VLDB unloads and reorgs; NextForm for data, file, and DB migration; FieldShield and CellShield for data masking; and, RowGen for building test data.
