

World's smartest backpack "EnergySac" seeks crowdfund support on Kickstarter

Innovative high-tech product design company D'code has launched a crowdfunding campaign at Kickstarter in support of its world's smartest backpack EnergySac

ADDISON, UNITED STATES OF AMERICA, November 5, 2016 /EINPresswire.com/ -- Addison-based product design company D'code has recently launched a crowdfunding campaign at Kickstarter seeking support for its futuristic backpack [EnergySac](#). Dubbed as the smartest backpack of the world designed to revolutionize lifestyle, the backpack sports innovative features like GPS tracker, solar panel, USB ports for charging devices and excellent add-on specifications. The crowdfunding campaign is geared to raise around \$20,000 by November 27, 2016. "We are excited to bring to you the backpack of the future which will smartly alter how you lead your life and that too for better. An exclusive blend of leading technology, innovation and creativity, our EnergySac is a backpack and MORE. We have integrated with GPS tracking that can be connected with a phone app and would monitor your bag's location all the time just with one push of button. In sync with your contemporary active lifestyle, we have powered it with 3rdGeneration Solar Panel Technology to charge up your smart devices while on the move- and that too at lightning fast pace. You can charge two devices at once and on a bright sunny day. Our Solar Panel will charge up your iPhone 6S in no more than 2 hours! And, yes, it's lightweight, durable and would outlast all the previous backpacks you had. However, such a game-changing project demands robust financial backup and hence this crowdfunding campaign. Your generous support would be much appreciated", stated Lalit

Kumar, the co-founder of D'Code and one of the collaborators of the campaign. Kumar co-founded D'Code with another young enterprising fellow Aashish Kumbhat. EnergySac features a strong make crafted from jacquard nylon mesh which makes it almost indestructible. Lalit assured strong resilience against wear & tear and regular rough use. As add-on bonus, the futuristic backpack sports a convenient sandwich mesh which is especially designed to ensure a comfortable sweat-free back for the user. And thanks to its water-resistant build, EnergySac is impermeable to the weather conditions. "Added to its high-tech features, the EnergySac is equipped with all specifications of an authentic backpack. It comes with 2 big stationary & lifestyle compartments and another one to house your laptop. A bottle holder, innovative SmartCard holder and hidden pockets at back that will keep your essentials out of reach of others, complete the look further. You would benefit from great storage capacity and supreme portability thanks to its handy grip. Besides,

we have incorporated reflective panels along contours of the backpack so that you can be spotted easily from a good distance at night. In short, EnergySac is just the thing for today's youth." Aashish also mentioned about the Energy Plug bonus cable that will allow the user to sync and charge both Android & Apple devices. A cool host of perks are waiting for the backers. These include a smashing pack of EnergySac, EnergyPlus & Smart GPS tracker at a discounted rate. Higher donations reaching \$175 & \$850 would be rewarded with twin pack and 10s pack respectively
