Adhesive and Sealants are substances applied to the surfaces of materials to bind them together and resist separation by blocking the passage of gases or liquids through the openings. They can be liquids which are viscous, with little or no flow characteristics.

Sealants typically have lower strength and higher elongations than adhesives. Adhesives and sealants offer many advantages through their ability to bind different materials together by distributing stress more efficiently across the joint. Reduction in cost over machine processes, improvement in the look and increased flexibility are some of its functional advantages. Sealants find its application in Consumers goods, Construction, Transportation, Automotive and Aerospace industries. Surface sealants require air in curing mechanism that changes its state from liquid to solid once applied. Desirable properties of a sealant include good binding properties, insolubility and resistance to corrosion.

The Global Adhesives and sealants market is segmented based on technology (Water based, Solvent based, Reactive and hot melts), by application (Construction, Paper board and related uses, Transportation, Footwear and leather and other uses), by geography (North America, South

America, Europe, Asia-Pacific and Rest of the world). Some of the key players in the market are BASF SE, Sika AG, 3M Company and Pidilite Industries.
