The factors such as growing freighter conversions, increasing redesign of greener aircrafts and new airplanes (A-380 and B-787) are some of the major drivers boosting the market growth. However, rising prices of raw materials and declining demand for older/refurbished parts or aircrafts are the major restraints for this market. Increasing demand of VIP refurbished jets will remain as a biggest opportunity for the aircraft refurbishing market over the forecast period.

Narrow body aircraft segment has accounted for the largest market share of more than 45% owing to increasing passenger traffic, which has resulted in the extended seat capacity within an aircraft. North America dominated the global market and accounted for largest share of more than 40%. The following factors such as development of networks within Central America and Caribbean regions, growing incidence of passenger traffic and simultaneous growth in low cost carriers are the factors favoring the market growth in this region.
