

Wearable Sensors Market to Reach US\$4.149 billion with 39.50% CAGR Forecast to 2021

Wearable Sensors Global Market Segmentation and Major Players Analysis and Forecast to 2021

PUNE, INDIA, November 11, 2016 /EINPresswire.com/ -- Summery

Wearable sensors market is expected to grow from US\$0.563 billion in 2015 to US\$4.149 billion in 2021, at a compound annual growth rate of 39.50% over the forecast period. Demand for these types of sensors has

been experiencing upswing since the major technological revolution over the last decade, which led to miniaturization of devices and their connectivity to internet and smartphones. Other key factors which have augmented the demand for these sensors are advancement in sensor technologies, multiple channels of wireless communication and longer battery life of the wearables. These sensors have found major application across healthcare sector and are being implemented actively for different applications like monitoring heart rate, pulse, body temperature, calories burnt among various other parameters. Personalized and remote health monitoring has also impacted the demand for these sensors with new form of devices being commercialized or, are in research and development phase. Even though, the demand of these sensors is growing exponentially; high power usage, privacy and security concerns are some of the factors restraining the market growth.

First section of the report deals with detailed research methodology for calculating market size and forecasts, secondary data sources used and the primary inputs which were taken for data validation. This section also outlines various segmentations which have been covered as part of the report.

Next section provides comprehensive market dynamics through an overview section along with

growth drivers, challenges and opportunities which exist in the current market. This section of the report also provides supplier and industry outlook as a whole; key industry, global and regional regulations which are determining the product specifications and a brief technological aspect of wearable sensors. Complete industry analysis has also been covered through Porter's five forces model as a part of this report section.

Thirdly, Wearable Sensors market has been segmented on the basis of type, application and end users. Under major product types Image Sensors, Position Sensors, Pressure Sensors, Inertial Sensors, and Motion Sensors among others have been covered, while by application this market has been segmented into Smart Clothing, Bodywear, Headwear, Wristwear and Others. End users of these sensors are Healthcare Enterprises, Consumers and Industrial users; detailed comprehensive forecast with analysis has also been covered as part of this section. Important regions for vendors in terms of market size is covered through detailed geographical segmentation. Geographical regions covered as a part of this section are Americas (North and South America), Europe Middle East and Africa and Asia Pacific.

Finally, competitive intelligence section deals with major players in the market, their growth strategies, products, financials, and recent investments among others. Key industry participants which have been profiled as part of this section are NXP Semiconductors, STMicroelectronics, Texas Instruments, Infineon Technologies and Analog Devices along with several other players.
